

Cimenterie
de la Tour

ADVICE TREATMENT

To provide our customers with a quality service, Cimenterie de la Tour offers its range of products for the treatment of cement tiles.

It is preferable to start any treatment a **minimum of one week after installation** in the case of laying with cement glue, and one month in the case of laying with screed, so that the phenomenon of carbonation giving a whitening appearance has completely ceased. This period may be longer (see the general conditions of sale)

It is important to wear rubber gloves, goggles and masks for the application of different products.

1st STEP - Cleaner

Use a product suitable for this kind of operation. These products are sold in more or less high concentration according to the brands. Cimenterie de la Tour uses Cement Tile Cleaner, diluted up to 30% for 1 liter of water (ie 300 ml

of cleaner for 1 liter of water) and applied using a bridge lava . Leave on for 5 to 10 minutes then rinse with clear water with a clean mop. The cement laitances will thus be eliminated chemically by the acid solution and the friction of the brush. Brushing will make the tile surface smoother and softer, making it easier to maintain.

Allow to dry for at least 24 hours

THE CLEANER MUST BE USED ONCE ONCE! If the white traces persist, use fine sandpaper (bodyshell paper) or Scotch Brite.

STEP 2 - Final treatment Waterproofing / water repellent / oil repellent:

Make sure the floor is clean, dust-free, dry and free from grease and moisture. Apply with a new window moistener a first coat,

let dry 4 to 6 hours . Once the soil is perfectly dry apply a second thicker cross coat, allowed to dry for 4 to 6 hours. Ensure a good distribution and there is no surplus. A 1 liter can will cover between 10 and 12 m².

After drying for 48 hours at 20 ° C you can put your floor back into service or finish for a satin finish and easy maintenance.

3rd STEP - Finishing with shampoo Cirant:

Pour 2 to 3 caps of shampoo into 5 liters of hot water. Wash your floor with a mop or a wrung out mop. Do not rinse, allow to dry. It is useless to rub.

4th STEP - Daily maintenance

With neutral non-acidic cleaning products (eg Marseille liquid soap). We advise you to clean from time to time with the shampoo waxing your floors will skate over time.

IMPORTANT: Do not wash with black soap that contains linseed oil before treatment. This would be catastrophic because the pores of the tiles are immediately clogged with linseed oil. In this case, it will be necessary to always use black soap for the maintenance of this soil!
